| 15.03.12 | Medieval Landscapes and Resource Utilisation, Alasdair Ross |

Environmental history is the study of changes over time that have resulted from society's complex relationship with nature. The environment is one of the most pressing concerns of the twenty-first century and this long term perspective on change is key to current debates. Researchers at the Center for Environmental History and Policy, University of Stirling have adopted a unique interdisciplinary approach that combines the arts and the sciences to further advance knowledge and understanding to the environment.

'Landscape Encounters' are a series of free lectures and designed to show case environmental history at the University of Stirling to a wider audience.
